

# CEANGAL-Messenger

*Your own way of communication*

## Project Team:

David Bullinger	david.bullinger@gmx.de	Backend, Database   ~10h
Fabian Dittebrand	fabiandittebrand@freenet.de	Test Manager, Frontend   ~17h
Lennart Royl	lefaro00@gmail.com	Database, Backend   ~10h
Lorenz Seufert	seufert.lorenz@student.dhbw-karlsruhe.de	Project Manager, Frontend   ~17h

Our Idea was to implement a new Messenger, at first just for text and, if there is time left, for audio as well. The conceptional Idea what we want to implement is shown in the diagram below.

Unfortunately, we had different Ideas of the features and the general structure of our Project. After this misunderstanding we decided that it would be the best if we get back to the drawing board and discuss what exactly we want to reach in this project. This time with an official Product Backlog.

Because of the time lack this close to the exams it did not seem to be a good idea to do this before the winter Break. So, we wrote down the points, we are not sure about, and scheduled a meeting in the first days of 2021 while we still have vacation, so we can Discuss those points and do a kind of Hackathon to implement the basic structure.
